Your Complete Memory Emulation Source

February 11, 2004

ALPTEX, Inc. announces the immediate availability of it's "ie" ROM emulator, the newest addition to it's growing family of memory emulation tools. ALPTEX's "ie", or internet emulator, is an 8/16 bit development tool for emulating a wide variety of ROM (Flash or EPROM) and SRAM devices up to 64 megabit in size. Multiple units can be arranged to emulate 32bit or wider memory.

This tool integrates seamlessly with all of ALPTEX's target interconnects...TSOP, PSOP, SSOP, DIP, PLCC, BGA, FBGA, mBGA...and capitalizes on our unique PGM II technology to make switching targets a snap.

Differentiating features include:

- 30nS emulation speed
- Built-in ethernet
- PGM II port
- Virtual UART
- Automatic Target Voltage Sensing and Matching from 1.8V to 5.0V
- User Programmable IO Header
- Aluminum Billet Case
- Free GUI Host Software
- Free Upgradable Firmware
- Price of \$1,995 is 40% less than closest competitive unit

ALPTEX, Inc. is a company involved in the design, development and manufacture of emulators, adaptors and interconnect systems for the emulation, test and programming segment of the electronics industry. ALPTEX is a privately held company located in Northeast Ohio. Established in 1992, we have been providing unique solutions for the memory emulation needs of industry since 1995.

Please contact Jane Ponn in customer service at (440)437-5570 for additional information.

ALPTEX can be found on the web at www.alptex.com.

Your biggest challenge should be your project...not your tools.
